

Project 1: Cemantix Clone - Getting Started

Welcome to your first project. You'll build a word-guessing game where players get semantic similarity scores as feedback.

Play the original first: https://cemantix.certitudes.org/

WHAT YOU'LL BUILD

A Cemantix-style game where players guess words and get similarity scores as feedback.

Get creative:

- Build it in Arabic (huge plus)
- Use themed vocabulary (sports, tech, OMC)
- Add your own gameplay twist

RESOURCES

Key concepts to research:

- Word embeddings (eg. word2vec)
- Semantic similarity and cosine similarity

Optional: CS50 AI Week 6 - https://cs50.harvard.edu/ai/weeks/6/

2-WEEK SPRINT

Week 1: Research + Build Core

- Understand word embeddings
- Load pre-trained models and calculate similarity
- Mid-week check-in: **Wednesday** (ask questions, report progress)

Week 2: GUI + Polish

- Build game interface
- Add creative features

- Prepare demo

DELIVERABLES

- **Deadline:** January 1st at 23:59
- **Demo:** TBD

During the demo:

- Present your working game (we'll play it)
- Explain word embeddings and semantic similarity
- Share what you learned

Don’t forget to have fun!
